Barbarea (Barbarea), ??? ??????????? ? ??????????????

Barbarea (Barbarea) is a member of the Brassicaceae = Cruciferae family. It is a perennial herb with a thick, woody root. The leaves are green, pinnate, and have a serrated margin. The flowers are yellow and are arranged in dense, terminal racemes. The plant is found in mountainous regions of the Balkans, particularly in the Dinaric Alps. It is a common species in the region and is often used in traditional medicine. The plant is also known for its ability to grow in rocky, mountainous areas. It is a member of the Brassicaceae family, which is one of the largest families in the plant kingdom. The plant is characterized by its thick, woody root and its pinnate, serrated leaves. The flowers are yellow and are arranged in dense, terminal racemes. The plant is found in mountainous regions of the Balkans, particularly in the Dinaric Alps. It is a common species in the region and is often used in traditional medicine. The plant is also known for its ability to grow in rocky, mountainous areas.
